1.0 GROUNDWATER MONITORING PROGRAM.....1

1.0 GROUNDWATER MONITORING PROGRAM

Entergy commenced groundwater monitoring around the recycle ponds at the White Bluff Plant in the third quarter of 2018. Following a quarterly sampling schedule, in 2018 Entergy collected two of the eight initial independent samples necessary to initiate a detection monitoring program. Entergy will continue to collect samples from these monitoring wells on a quarterly basis until eight independent samples are collected from each well. This is anticipated to be completed in the second quarter of 2020. After completing the initial sampling, Entergy will initiate detection monitoring and prepare an annual Groundwater Monitoring and Corrective Action Report for 2020. This report will be placed in the facility operating record no later than the annual reporting deadline of January 31, 2021 and subsequently posted to the associated public website.
